# Payment Gateway Solutions

In today's world of Internet, Ecommerce is becoming a highly developed business all the time. Payment gateways are almost a necessity for online stores that allow credit card payment. A payment gateway is an essential component of any online business.

Payment Gateway is a service that automates the payment transaction between the shopper and merchant. It is usually a third-party service that is actually a system of computer processes that process, verify, and accept or decline credit card transactions on behalf of the merchant through secure Internet connections. The payment gateway is the infrastructure that allows a merchant to accept credit card and other forms of electronic payment. When referring to payment gateways used for Internet transactions, it may also be called an IP payment gateway.

When people buy from you over the internet, they will be paying for products or services using their credit cards; it is the de facto system of online payments. At the checkout stage of the transaction, the buyers verify their order and then type in their credit card details. The only problem is that it is all just worthless numbers unless you get that information to the banks or the card processing companies, and you will find it hard to do that as a organisation. That is where the services of an online payment gateway will come in.

A gateway serves as a channel that can bring a thing from one place to another. When doing eCommerce, a gateway plays an integral role in making verifications and allowing credit card transactions to come through. A number of online companies offer payment gateway services for businesses that accept credit card payments. Business owners can choose the payment gateway provider of their choice. However, there are companies that offer a combination of services such as those that offer software packages that include a merchant account and a gateway service option as well.

There are many different types of payment gateways out there. Some are offered by the banks we're with (such as Westpac or ANZ) and others are offered by third party companies such as eWay, PayPal, WorldPay and others. From a store owner's point of view, it is often best to go with the option that streamlines things for your customer.

Payment Gateway integration refers to an e-commerce service that authorizes payments for e-businesses & online retailers. In a way, it represents a physical POS (Point-of-sale) terminal located at most retail outlets. Payment gateways encrypt sensitive information, such as credit card numbers, to ensure that information passes securely between the customer and the merchant.
