# **Book Software Helps Writers Keep Their Stories Straight**

Many people use book software to help them write their books. There are programs for everything - books to help with plot development, to keep deadlines straight, and to organize your book library. Since writers are trying to write books that capture an audience, it's no surprise that you might have more books than you can manage. To make sure you can fully utilize the library you already have, here are some ways book software can help you finally write that great American novel.

r  
rRemembering What You've Read

r  
rYou've read a number of books in order to prepare to write your own book. You've read everything from books similar to the one you want to write to books that are about writing. Wouldn't it be nice to know what you've already read and what's already on your shelf? With book software, you can have all of these titles at your fingertips. This will help you know what reference materials you already have on hand before you go out and buy more books that you probably don't need. From fictional inspiration to non-fiction grammar and style guides, you can enter in these books and make sure they're always in order.

r  
rInspiration Readily Available

r  
rInspiration comes from a variety of sources, most often from the books you've read. With book software, you can begin to take notes on the books you already own, remembering what books gave you which ideas. By making a few notes in the software program, you can keep track of the stories that you may want to read again before you start writing that next scene. Just input the titles of the books in your library and then you can have a list of inspiration, whenever you need it. And when you're writing, you always need a source of inspiration when writer's block strikes. You might just skim over the titles whenever your writing starts to slow down, finding new things to write about in your novel or your non-fiction piece.

r  
rKeeping Track of Self-Published Books

r  
rOnce you've written a book or two, you might choose to go the self-published route until you get your proposal into the bigger publishing houses. In order to keep track of all the books you've written, book software can help you. Or you might want to keep track of all of the books you want to write so that you can easily stay on course with the goals you have in mind. Just typing in the titles you want to write can serve as motivation and as a way to help keep you from turning away from the keyboard.

r  
rWriters can use book software in a number of ways, from organization, to inspiration and to keeping track of your work. The goal is to eventually have your book titles the book software programs of others, as that's what will ensure your long term success as a writer. Writing isn't easy, but software can help to make the job a lot less challenging.
