# **Satellite High Speed Internet Access - For Rural Areas**

Living in a rural area doesn't mean that you can't have fast internet. With satellite high speed internet access you can take advantage of the benefits of broadband, even if DSL or cable is unavailable in your region.

Satellite internet is nothing like dial-up. In fact, speed is about 10 times faster than dial-up. And that is fast enough to browse multiple websites and check your email without having to wait endlessly for pages to load.

With dial-up there is always the concern that you might miss an important phone call while you are online. There is also the problem of waiting to make a phone call because someone else is using the internet and tying up the phone line. The only solution was to spend money for a dedicated phone line that would be strictly for internet use.

And if you're running a home office with dial up you know how frustrating it can be when you are trying to work with a client who has high speed internet. You just won't be able to keep up with them in real time.

There are going to be some things you can't do at all using dial-up. For example, running an e-commerce site with a dial-up service is next to impossible. It can take hours for graphics to load, orders to be processed, and inventory to be updated.

These problems disappear when you have satellite internet.

A second benefit to satellite high speed internet access is the opportunity to work from home instead of commuting in to your job. More than ever before, businesses are giving employees this option. Not only do you save on travel time and expenses, but your employer saves as well. The money you save by not commuting will more than cover your costs to have satellite internet and then you can work in the comfort of your own home.

Telecommuting won't work with a dial up service. Even transferring a large file of completed work is too much for a dial up connection. Never mind trying to conference with other staff members while using the internet to view or send information.

Yet another benefit is the chance to operate a business out of your own home. Being able to check orders or emails quickly, work with clients, do research, and send or receive large files is only possible with a high speed internet service. If your business is at all dependent on the internet, trying to function with dial up can be a frustrating experience.

There are a couple of issues with satellite internet that you should be aware of before you switch from dial-up. There will be times when you will experience a temporary interruption in satellite service. This happens during severe weather. Once the severe weather moves on, your satellite internet service is automatically restored.

The second issue is what is called latency. This refers to the very slight time lapse in the transfer of information. You may not even notice this when you are doing regular activities like emailing or looking at websites. It can be a problem for those who play live interactive games online or if you are trying to win a bid on an online auction at the last second.

Despite these issues, satellite internet is far superior to dial-up internet. Now you can live in the country and still enjoy the benefits of fast internet with satellite high speed internet access. There is sure to be a satellite company who can set you up with a plan to suit your needs.

Rural areas often have trouble getting access to broadband internet connections from cable or DSL providers. Get fast download speeds and easily shop large sites that are painfully slow with dial up. Find out about the [best satellite internet](#) service provider that offers speeds up to 130 times faster than dial-up. Visit [satelliteinternet-now.com](http://satelliteinternet-now.com)
