Malvern Photography - Digital Photography Tips

Few families would consider leaving home for a vacation these days without reliable, high-quality digital imaging equipment-whether it's a camera or a camcorder.

Here are some tips from the experts at Canon and Malvern Photography to help you make the most of memorable vacation moments:

Always be prepared: Don't forget to bring backup camera batteries or memory cards so you'll never miss a shot.

Creativity is key: Sunsets and mountain ranges are always great backdrops for family pictures. You'll be able to create images featuring an array of natural color and light while showcasing your happy family if you use your surroundings in interesting ways.

Share the fun: Take turns and let others control the lens for a while. A camcorder such as the Canon DC40 DVD Camcorder is so easy to use that anyone in the family can take great video. The camcorder records direct to DVD, is compact and takes high-resolution, 4-Megapixel digital photos.

Strike a pose-No!: Candid shots of family members can capture their personalities much better than carefully orchestrated photographs.

Don't be afraid: Take your PowerShot SD600 Digital ELPH camera with you on a scuba diving adventure. The 6-Megapixel camera has a 16:9 widescreen mode for full-screen viewing on widescreen TVs and computer monitors, and is the right size for taking along on any deep-sea adventure.

Use the WPDC40 underwater camera case (to depths of 130 feet) to protect the camera and snap pictures in the surf.

Hello from abroad: Print and send photos with Malvern Photography before you even get home: The SELPHY CP510 photo printer is small enough to pack in your suitcase and lets you print pictures in under a minute. And the paper used for printing photos doubles as a postcard! How's that for multitasking?

Pack lightly: Use the PowerShot S3 IS to capture hybrid digital products like still photographs and high-quality video. The 6-Megapixel camera has a 12x optical zoom lens, image stabilization technology for steady shots, a "movie snap" feature that lets you take still images while shooting movies, a widescreen mode for full-screen viewing and still leaves plenty of room for any souvenirs you might want to bring home.

Hybrid digital products can take photo stills and shoot movies without taking up too much space in your luggage.
