Using Your Kindle To Full Effect

The main function of the Amazon Kindle is to allow users to find read electronic books and other types of electronic media. This standalone computer hardware can contain up to 3,500 books as long as they do not have images and it is also capable of displaying PDF files. Users can choose books and other reading materials from Amazon's store for Kindle and download them directly to this device.

It is also possible to use the Amazon Kindle to send tweets to your followers at Twitter to tell them about what you are doing or to simply inform them about the astonishing new book that you have discovered. This is possible because this particular microblogging service has a mobile version that can be accessed with the help of this particular hardware. Access is through the browser that has been included with this device. You may be able to connect to the mobile edition of Twitter after you have ascertained that Javascript is running.

You may also be able to access your Gmail account through your Amazon Kindle and through this you can send email messages to various people. This function is also available if you know how to utilize the web browser that is built-in and then activate Javascript. However, it is important to remember that the browser in your Kindle has only a few basic features so that a large number of the functions available through Gmail may not work in this hardware.

It is also possible to share with your friends certain passages from the e-books that you have read in this kind of hardware. You can highlight those passages that you think your friends would find interesting. To do this, you simply point the cursor to the start of the passage, hit the Navigation button, transfer the cursor to the last character of the passage and then push the Navigation button again. These moves will cause this particular content to be saved in Kindle as a text file that could be opened using common tools such as Notepad.

The Amazon Kindle can also be utilized to grab a screen shot of a page in the e-book that you have found to be worth sharing to friends. To do this, you simply press the G key while simultaneously pressing the Shift and Alt keys. Your device will inform you that this kind of action had been taken by causing the screen to flash. The screen shot that you have taken will be kept in the device as a GIF file and you can easily copy this to your computer through the use of a USB cable. You can easily locate this file by searching for the Kindle icon that is in your documents folder.
