# **How To Save Money By Social Networking GREEN**

What is the difference between a green energy social network and a regular social network? What is a green energy social network anyway??

Most "Green" social networks want to tell you how to think, and how to live. They tell you for whom you should vote, and how much water you are allowed to use in the shower in order to be "Green". They also tell you which kind of wood your floors should be made out of, along with from where you should get your food!

Who wants to be told how to live, when 90% of them COST more because they are "Green"? Wouldn't you rather join a social network that shows you how to save money?

ENOUGH is ENOUGH! Those "Green Social Networks" are NOT what people need in today's economic climate. People need a network who cares about the average person's budget, above their carbon footprint.

There IS however, a solution. We finally have a cure to end the corruption and disease of special interest social networks like Care2.com, and TreeHugger.com. Their news and content is entirely one-sided, one sided, and totally inaccurate from the stance of hippy barely out of high school with zero world experience.

What is this wonderful cure you ask? A real social network that defines realism and helps the PEOPLE get ahead. A social network that doesn't guilt you into going green, but rather gives out information to help people save energy, thus saving money.

This is not a "Green Social Network", this is a "Green ENERGY Social Network". What is the difference? A Green ENERGY Social Network focuses on what matters to you the most, ENERGY & MONEY. This network still loves the planet, and loves the animals, but brings a real world practicality to the position.

A Green ENERGY Social Network will not tell you how to live, what to think, what to eat, if you should use bamboo over pine, or anything of the sort. They simply give you the answers you need, to the questions you have through videos and forums, blogs, and even interactive chat between friends. Think of this as a facebook for green energy!

Here are the facts, most people right now cannot afford green energy as it stands right now, even though they need it! Solar is extremely expensive, as is wind power, etc. There needs to be a way for people to get these energy sources, while saving money NOW, not in 8 years. Most solar and wind is looked at as a very long term investment before you save money!

Enter GreenFuelSpot.com, an alternative ENERGY social network that caters directly to this large crowd. You want solar, you want wind, but you can't afford it? No problem! We have videos, books, forums, chats, blogs, etc . that will help you build this stuff yourself! The world's greatest DIY social network for green energy has arrived!

Go to GreenFuelSpot.com and join today, to learn how you can save money and help others do the same in a fun, easy environment.
