Have you had an opportunity to evaluate the new iPad? If so, then you probably realize that it's one of the nicer platforms out there today on which to read and enjoy an e-book. If you're an e-book publisher, or someone attempting to make money with e-books, this is something you have to be aware of! The reason why has a great deal to do with the fact that the screen size is sufficiently large enough to be able to allow somebody to comfortably read the text that is on it. Are you telling your e-book customers that they can read your publications on this device?

Among the problems that many e-book readers in the past had revolves around the truth that the makers of these devices tried to make the device itself a little bit too compact. Granted, these problems have largely gone away and the new generation of e-book reader that is out there is a perfect fit for most of us. Ironically, the iPad was not originally designed to serve specifically as an e-book reader. Instead, it's designed to be a general use computer system. Nevertheless, you can use it to read e-books.

Many e-book readers are specifically designed to withstand a great deal of punishment. That cannot necessarily be said for the new iPad.

Here's the harsh truth: if you own an iPad, feel free to use it as an e-book reader. You'll find it to be a fantastic device to use for this function. Also, if you haven't been e-book publisher, you might want to point out the truth that your e-book can be read on this particular platform.
