Some Useful Tips About Digital Download Protection Scripts

Do you think about hackers capturing your digital download page and passing it on without permission? You probably don't realize it but it is more than likely something you have already experienced this even though you may not realize it. Every time it happens to people it is thought that they can lose a large part of their profits, up to 50% in most of cases.

I understand how frustrating it may be because I have experienced this many times. I was aware of resistance of my system and that is why I was so discouraged. Hackers took my [download](#) page and had posted it throughout the web which meant they were stealing my product again and again before I even got an idea about it. I was saved by some specialists who know a lot of interesting things about the download protection and I would like to save you now! I would like to share with you the information about using a special system that will prevent people from accessing your download page so download items are only accessible by your users.

The following paragraphs describe the two main types of protection programs you can use to prevent this:

1. You can utilize a software that prevents theft by giving your users a special URL that only is valid for a certain period of time. They receive such link by email instead of loading the webpage online where any visitor can get it if they know how. Can this stop thieves from sharing the download link during the set amount of time? Often, they would have some time to post it in a warez site and tell people that it is only available for a month other period of time. If you have good digital download protection, that won't happen.

2. Various security software protect you from the situation described above from happening. They can do that by letting you control how many times the download page can be accessed. That allows for problems that a legitimate customer might have accessing your page and lets them get in touch with you if they need additional access. It also prevents thieves from stealing your digital download page and sharing it online because no one will be able to access it after the set number of downloads have been attempted.

No one wants to work hard in their business only to have a thief take what you have worked on for so long. You can use digital download protection to stop thieves and to make sure your money stays in your pocket.
