Satellite Internet Reviews- Everything You Need To Know About The Wonderful And The Not So Wonderful World Of Internet Via Satellite

For many people who live where there is no access to DSL or cable internet, moving up to high speed internet can be difficult. If you count yourself among those who can't wait to get away from dial-up, internet via satellite is a do-able choice. But before you do, you may want to look over a few satellite internet reviews first.

A satellite internet service can be a wonderful thing, but there are times when it's less than wonderful.

The wonderful part of satellite internet comes with finally getting to do the things that those with a true high speed service can do. Like watching a YouTube video, or trying to do some online shopping without watching paint dry while the site's images load. That's a slight exaggeration, but if you've lived with dial-up internet, you know the difference.

With a high speed satellite internet service, you'll be able to browse through multiple websites and have a ton of tabs open in your browser. Setting up and running a home based online business is do-able. Just like with high speed internet, you can upload images and files, set up a payment processor and more.

Even if you don't want to have an online business, does the idea of e-commuting have an appeal? With a satellite service you can stay connected with your job in the city, while completing tasks at home. This wouldn't be possible with dial-up. But with satellite you can send and receive large files, even those with large graphics attached, do online conferences, and generally work alongside colleagues as if you were right there.

You'll quickly discover that the speed of downloading is slower than DSL or cable, but fast enough to download podcasts and music, or watch videos. Post in your favorite forums and keep in touch with friends on Facebook or Twitter. Real time chatting is possible. You can even use Skype now, where before this wasn't do-able.

Realistic satellite internet reviews need to include the not so wonderful part too. The two main drawbacks to internet via satellite are the relatively higher cost when compared to other types of internet services and weather factors.

It's an unfortunate fact that satellite internet is affected by certain weather conditions. If you have satellite TV you know how the signal is sometimes affected by severe weather. The satellite internet service is affected in the same way. During a heavy rainstorm, service can slow down or even be completely disrupted.

You just have to live with this. Your satellite service will occasionally be affected by the weather that comes between your dish and the orbiting satellite.

Snow also affects the service. If your dish becomes snow covered, signal transmission grinds to a halt. To start it up again, brush off the dish. Or, if you have a lot of patience you can wait for the snow to melt.

The other main drawback to satellite internet is the higher cost. With a regular broadband package you can get a basic plan for a reasonable price. And these packages allow for a large amount of data to be downloaded as well.

Internet using satellite flat out costs more. And you are going to find a limit as to how many megabytes you can download on a daily basis. You can get a bigger package but be ready for a substantial price increase.

Even with these shortcomings, it has a lot of advantages over dial-up. So, if you're thinking of getting rid of dial-up, check out a few satellite internet reviews so you can make an informed decision.
