Webmaster Tips In Redesigning A Website

If you're planning on redesigning your web site, stop and take a few minutes to plan out what it should look like and how you would like it to function. By rushing it you could make unnecessary changes that will negatively impact your company's image or web site's functionality. Below are a few suggestions that will help you make positive changes to your web site.

If you are thinking about making changes on a grand scale, you may want to take a step back. Try making a few small changes first and see if they make a difference. Big changes can be hard for some people to cope with. A lot of people aren't that comfortable with technology and may find an abrupt change hard to deal with or confusing.

You may even lose a few visitors if you change your web site radically. People who have used it regularly may have gotten used to the way it is set up and find it not worth the trouble to learn new navigation.

Small changes are usually more palatable. They are easier to adjust to and people don't object as often or vehemently to them.

When considering a redesign, it's crucial to consider speed. The rate at which your web site loads means a lot to users. You'll want to make sure it's accurate.

Elaborate graphics can make your web site slow and deter people from using it. Few people will be willing to wait minutes for your pages to load when they probably can get the information faster elsewhere.

Any type of web site redesign should also take into consideration the functionality of the navigation and the value of the related links. The navigation should be easy to understand and logical to follow. You don't want to risk losing visitors that are frustrated by not being able to find what they are looking for on your web site.

The most important thing is to keep everything as user friendly as you can. This will ensure your regular visitors stay and new visitors will be welcome.
