Do It Your Self Sash Window Draught Proofing Will Save You Money Today

Do it your self sash window draught proofing will save you money on your heating and cooling bill. Many are taking steps to bring up their homes energy efficiency level. You could save a lot of money each year by taking the time to insulate your home.

Also, there might be some tax credits or government rebates for people who take steps to insulate their homes. In this tough economy, people need to look are money savings everywhere.

If you lampshades and window shades move around on windy day or in a storm, then you need to consider weather insulation. If your home is made of brick then the air will come in and go out primarily through your windows. But if you home is timber based, then you will have more areas where air will come in and to out of your house.

The local supply store will have many different proofing kits available. Ask the sales staff for help in choosing the kit right for your need. The weather strip in the kit is used to block the area around doors and windows in your home.

At first you might think it is of little consequence to block the small gaps in your windows and doors, but this will make a big difference over time on your home energy bill. You will also be helping the environment by insulating your home. When you insulate your home, you will not be using as much resources, which saves you money of course, but also helps keep the earth clean.

There are two basic weather proofing strips. The compression seal is used for gaps between fixed and moving edges of doors and windows. The wiper seals are used for sash windows and sliding doors. Wiper seals may also be used for hinged openings.

You need to measure the windows you want to insulate. Measure the width and height of the windows before going to the hardware store. You need to know the size so you will purchase the right weather strip.

The sales people will be a great help if this is the first time you have done this work. There are also books in the library and information on line to help you with your insulation job.
