# Best Web Hosting Services From Finland

Towards the end of 20th Century, individuals, business-oriented and even not-for-profit organizations had taken up the services of internet as one of the leading platforms for the development and promotion of their cause. And, the World Wide Web has had become the single most powerful network to be utilized most extensively for this purpose. Web hosting is the service required to launch the information on the World Wide Web. Other services like domain based email, database services and e-commerce facilities have taken business services closer to the consumer. Web hosts provide all these services and also the unique services of hosting max 1times are commendable. Web pages require space on servers, which are either owned or leased by the web hosts. But, prior to taking the services for web hosting, users must ensure the fulfillment of some of the key criteria. These criteria may be summed-up as the size of web-space provided on server, provision of File Transfer Protocol (FTP) required for uploading of files on the internet, security, reliability and access speed provided by the web host, quality and promptness of support services, cost of services and space and bandwidth required for data transfer. The services of hosting max 1times are considered respectable.

Web hosting has become the best alternative to conventional advertising modes. The selection of web hosts has its many criteria like the size provided by the host on server, whether File Transfer Protocol access is provided or not. It facilitates hosting max 1times and later on new information pages can be uploaded. Other criteria are level of reliability and security, pricing for fitting in budget, quality of support services and data transfer rates. Sometimes more facilities like hosting max 1times are also provided.

With the growth of internet towards the end of the 20th Century, no other IT related field has seen so much growth as web hosting services. And Finland is one country that has seen seamless growth and development in this field. Today there are more than thirty major web hosting firms in Finland that have individually hosted more than a thousand of domains. It was in Finland that the first prototype of a Graphical User Interface to the World Wide Web was developed in 1992. It was called Erwise and it was developed in Helsinki University of Technology (HUT). It was the combined effort of four Helsinki students, namely - Teemu Rantanen, Kari Sydmanlakka, Kim Nyberg and Kati Suominen who had worked under the guidance of Ari Lemmke. However, the development of this web browser stopped later on due to shortage of funds.

The additional facility of hosting max 1times gives the user the edge over the choice of the web hosts. Most of the web host providers in Finland provide hosting packages containing Content Management System either for a nominal fee or sometimes free of cost. Finland has a history of introducing ground-breaking technology to the world in almost all fields.

Another market development in Finland is in the form of hosting max 1times. Finnish web hosting providers are today providing peak technology to their clients. As in the telecom industry, the technology offered by these companies is world class. The web hosting market of Finland is becoming more and more competitive. But still new web host providers are entering this largely untapped market.
