# **The Uses And Benefits Of Genetic DNA Testing**

With recent advances in scientific knowledge and high technology, DNA genetic testing is now widely developed and used by most people. The DNA test is relatively used for paternity testing, testing for various genetic disorders during pregnancy, and for forensic investigations.

Paternity testing is used to establish who the biological father of a child is. Sometimes when parents are uncertain paternity of a child may affect their relationship and peace of mind, unless the father of DNA testing. It is important to know child paternity for legal considerations such as who will be placed as father in the birth certificate, who will be giving financial support and for the mere reason of who will the child recognize as father as soon as he grows up.

The genetic DNA testing is done by collecting a sample father, mother and child's DNA, this can be done at home using a DNA testing procedure painless and easy to get their skin swab inside their cheek. This is then compared accurately and of utmost security in DNA testing labs. It is a procedures of paternity testing is much more accurate than older methods.

Genetic DNA testing is also a great help in creating accurately your family tree as well as a sure way of verifying family history. This method studies part of the Y chromosome that changes slowly through the generations which will be used to compare to others. Ancestral lines are established when people will show similar characteristics in certain places of this specific chromosome. This method is similar genetic ancestry testing is used to determine what percentage of each racial group in your DNA. Take this test laboratories in genetic ancestral DNA testing or home DNA testing is to test a specific service to determine your ancestors and history of your race.

The prenatal genetic testing can also be used to determine paternity and also to discover many of diseases or health problems that children can achieve in their lives, and this test is performed before the child is born. These diseases may be related to DNA damage and DNA test is a factor in whether we can secure the child is sick to warn parents of what to do with their child.

Genetic DNA testing is performed for many purposes and uses in individuals, but all provide accurate results conclusively establish paternity, maternity, family ancestry and possible health problems of the DNA.
