# How To Create A Online Presence

In an era in which even a food manufacturer on a minor road has a laptop and an Internet connection, with controls on its website, most companies want the same thing. Is significant and growing global in the vicinity of the concepts of the Internet.

Now a big question comes is how to create a web site?

In case if you don't have time or technical knowledge, you can obviously hire some one or a cheap web hosting company to do the job for you, which might not be satisfactory. There are many cheap hosting plans available out there, who readily help you in making your website all the way. There is a lot to learn from these cheap hosting plans as well.

The first step in building a website is to decide the domain name for one. It acts as the identity of your site and people can view your site by typing the domain name you have provided. The more attractive domain name surely compels the lay man to surf the site least once.

After this comes the abutting footfall of architecture the web pages. A web armpit is annihilation but accumulating of web pages, affiliated with anniversary added and a affiliation with the database. You can do the coding allotment in java, php, .net, xml, html any of the browser accurate language. If you are not acceptable at coding, you can apprentice it or you can appoint some bargain web hosting aggregation for the same.

After creating your pages, your web site is ready, all you now need to do is publish it, so that people all around the network of networks i.e. internet are able to view it as soon as they feed your url to the address bar of the browser. For this, you need a web host, which keeps your pages all round the year. There are free web hosting plans, cheap web host providers as well as paid ones. You can choose one depending your purpose and reputation you aim to maintain.

Thus your site is ready and a highway to your success is all set to drive. At HostLuck.com you get a website builder free in all your hosting plans. Good luck.
