Paper Carrier Bags

We as consumers have a very interesting dilemma. Is it true what the mass media says about the prohibition of plastics bags in many shops worldwide? Seems like a good idea doesn't it?

So the question here is whether supplying paper carrier bags is actually better for the environment than using the plastic ones. Is it the great idea its cracked up to be?

Because paper is perceived as being a natural product, it is assumed to be better than plastic, and in many ways that is true. The major reason being of course the time it takes plastic to decay over paper. Paper will generally be broken down in a matter of months, whereas we all know that plastic is here to stay.

Stores and supermarkets adopt these policies as they are keen to show their green commitment and obtain positive public relations as a result. Of course, many shoppers are also environmentally aware too and they may choose to support the greener supermarket over another.

Whichever material is used to make your carrier bags it is a good idea to recycle them. Plastic can be used for several times before they wear out and whilst paper bags can be used more than once they will not last as long. With many towns and cities having excellent recycling programs these days it is perhaps a case for using the recycling bins and containers provided to recycle the paper.

The issue is that paper carrier bags could also be recycled by you at home and be reused. If you do not leave them lying on the street it could help the environment by making less pollution. This would be a good way to deal with it and give a better solution as replacement of plastic that is harmful to the environment.

In conclusion, you will win by choosing paper bags instead of plastic ones or any other kind. Because they are more comfortable to use and at the same time you will help the planet.

Don't purchase any [paper carrier bags](#) until you've visited Business Pac, who offer [wholesale carrier bags](#) for business large and small.
