# **Portable Notebook Printers: All About Portable Printer With Scanner**

The ability to bring your laptop anywhere is awesome. It allows you to work and gain access to the World Wide Web almost anywhere. Laptop computers are perfect for many people who work in the field so they can document and make records on the field without the need to travel to the home or office just to use the computer. However what is the use of a mobile computer if you are going to get back home or office just to make a memo or report for your business presentation.

Having a small transportable printer that conveniently fits together with your laptop in your attach case comes very convenient and expands the usability of your laptop computer. Think of the different tasks you can do if you own a printer with you while on a holiday or in the field working. You can generate a memo and print it on the spot. Label a spot or put a sign in a professional approach. You can also print extra or additional handouts for your presentation which you forgot to do at home. You can also share a copy print of your favorite photos to your buddies and relatives while staying in them.

Portable printers are normally battery operated and can print several documents before recharging it, or if there's an electrical outlet available, you can simply connect it in to preserve the battery. The mobile computer communicates and delivers its documents via IRDA or Bluetooth wirelessly. You also have the option of attaching it to almost any personal computer via USB port. The smallest portable printer you can buy basically depends on the size of paper you intend to work with. It also depends on how much cash you are willing to spend.

In case you are considering to use it for printing a receipt or photos you can perhaps have it as small as the typical wallet that normally fits at your back pocket. If you are planning to print a larger size documents say A6 sized bond paper then you can have it a bit longer than the width of the paper. The only downside of using a portable printer is that they usually have low printing quality but good enough if you are only printing text files, besides on Polaroid printers. Also, the rate is most likely slower than most desktop printers.

In the future, expect to see a much smaller sized compact printer, the length most likely will not change a lot but the width and height might. The quality of print and the speed will perhaps increase enabling you to print higher quality images quickly. Some companies are now launching an inkless printer which enormously reduces the overall size due to the space removed by the ink cartridge.

The secret of this compact portable printer relies on the paper which utilizes unique components that provides outstanding colors when activated. Popular printer companies like Canon and HP are continuously improving their printers, producing smaller and high quality printer all the time. There will come a time that the size of the printer will be so small that it can be enclosed into the laptop and you do not have to get a separate printer anymore.
