Few Ways To Bring Your Laptop Back To Life Again

A used laptop can withstand only so much damage before it starts to look old and raggedy. But you can do a little cosmetic upkeep on the keyboard to make things a little newer.

The laptops are really overtaking their desktop brethren in terms of usage worldwide. They are easy to move around and great to look at. But they suffer other problems in their place. For example, they aren't so sturdy. Ask anyone who's dropped one.

Keyboards take a real beating from laptop users. There are so totally many situations like when you spill water or coffee or wine or soda. Water is better than any other of the above mentioned, because you just dry it with a cloth.

All sorts of spills can leave a keyboard useless. Use an absorbent cloth to blot up any standing liquid. Then take a few simple steps to do what needs to be done to take your laptop from dead to life again. Read as we have outlined here:

- 1) Shut off your laptop first. Take your flathead screwdriver and insert it underneath the laptop's frame which is over the keyboard. Lift it slightly until you can pull it away with your hands. Next, detach the keyboard from the computer by way of the connectors. Just pull them straight out.
- 2) Replace the keyboard exactly as it was. Put the new connector into the computer with the appropriate pieces in the tabs at the back. Press down quickly and hard until you feel a snap.

Ensure that all the connectors are properly connected and in the places they are supposed to be. This will ensure that nothing slips out later. Then put in a new battery too.

- 3) Be extra careful when you do any keyboard repairs. If you don't know what you are doing, there is a very good chance you could actually screw something up more than it was before.
