# **Use Only The Multifunctional Custom Poly Bags**

Perhaps the only time you have really thought about custom poly bags is when a store clerk asks you, "Paper or plastic?" However, most of us spend a lot of time carrying purchases home in these flimsy-looking but sturdy carriers decorated with the logos and slogans of the stores we frequent.

Custom design is a large part of this industry, because the versatility of the substance makes it suitable for many purposes in many different industries. Whether the function or the form is most important, whether the use will be back of the house or designed for public display and advertising, the poly bag industry is eager to meet the challenge.

This form of plastic is more transparent than any other, although it may be made opaque as well. It can be rolled into a film which is still remarkably strong and puncture resistant. It does not decompose in sunlight, can take very high heat without disintegrating, and can stand up to extremes of weather. Moisture resistant and long-lasting, poly bags can last for months even when used outdoors in garden centers and farm supply stores.

It can be clear, opaque, frosted, colored, and patterned. It will take print, can be made like a film or like a waffle, made in great heavy sheets or thin enough to lie flat on a tear-off roll, or can be stiff enough to stand up on its own. In a warehouse stack, it can be made slip and creep resistant, but it can also be designed to be very slick and shiny. In other words, this plastic is versatile enough for all purposes.

Poly bags come in all forms. Mattress bags that are designed to contain bedbugs, bubble bags to cushion products in shipment, moisture proof bags to contain or exclude liquids, heat resistant food storage bags for deli use, black body bags for police work, instrument bags for medical sterilization, and sturdy or even biodegradable garbage bags are some examples. From plain bags to those printed with detailed pictures and instructions, these plastic carriers and containers are used for hundreds of purposes.

Since poly can be clear, frosted, colored, patterned, plaid, or printed, the designers who work for custom bag suppliers have the ability to satisfy virtually any demand. Offering many step processes of color and the most advanced printing and imaging processes, bag companies offer many exciting types of bags that can be customized to order. They often will work with original designs of shape and handle, as well.

Not only the design, color, and thickness of the bag is able to be custom ordered. There are many variations in shape of the bags offered online, and there are companies who will follow original designs presented by their customers. An online search will show you bags you may have never seen, from paisley bags of traditional shape to the amusing T-Shirt bag.

Handles also might surprise you. They vary from the usual hole on each side that makes it easy to carry several at a time to an elegant ribbon. Handles come in all sorts of designs that turn the need for a carrier into a fashion statement. The imagination of those who have created different ways to carry the different sizes and styles of bag is truly impressive. Custom poly bags are as much an art form as anything else in this innovative age.
