The Magic In Video Editing

Do you have lots of video tapes at home taken during the holidays, birthday parties, summer getaways, and several other special events? Maybe many of them are merely taking up space on the shelves and getting dust particles. People typically bring video cameras mainly because they would like to have fun recollections and mementos from an international place they've visited. Piles of video tapes are often times not looked at but the wonder in video editing changes that. Digital camcorders are less costly these days which means you can easily get videos of high quality. If you have a capture card, good editing software, and personal computer at your home, you can begin editing the videos you have compiled over time. When you have the last output, you can now view it along with your friends.

Magic usually requires you to get windows 98, ME, 2000, or XP to use such program. It supports media formats like WMA, AVI, ASF, SND, WMV, AIFF, MPEG, AU, and QuickTime. What can you do using Magic? It is possible to take videos simply by using FireWire or USB input device. You can also offer very good quality effects to the videos you have accumulated. The video and audio parts can be edited separately even if it's an individual file only. Just like other editing programs, you may also beautify the videos with more than one hundred fifty changes. It is also doable to overlay tracks by using Magic. Video files may be added with voiceover and background score. The timeline is the most essential windows within the editing software. In Magic, you can mix different file types on the timeline.

If you believe that these are all the things that Magic can perform, you're completely wrong. Other functions that Magic provides will be the following - include text titles, cut audios and videos, make DVD or VCD file formats, change contrast and color, turn and zoom in/out video sides, and upload videos to digi-cams. Your videos will look like the videos created by the pros right away. With Magic, professional editing is not really expensive. The user interface is drag and drop which makes it better to take the video clip into the timeline. This is also the time to add background music, title effects, scene transitions, as well as other effects to complete your work of art. For the timeline, you may also bring others file formats like WMV, AVI, JPEG, MPEG, and ASF. You can make a unique video or movie output in just minutes. The MPEG format is needed in order to produce DVDs, SVCDs, and VCD. You can create a movie in PAL or NTSC standards.

The amount of the tracks in the video can be displayed so that you can instantly get a new sound clip's volume to make dopler effects, fade outs, fade ins, and other volume effects. With Magic, you can split, join, trim, crop, merge, and modify color of the video files. The transitions allow it to become much more fascinating for users to generate regular videos which seem like great art works. It does not really matter whether you are a pro or an amateur. The thing is, with Magic, the basics are easily learned and right away, you can start fixing your video productions. It costs \$39.95 but you can also try the trial version by downloading it.

Is Magic for you? Try it now and see if it works well.

Presently, there are plenty of other sites offering many kinds of help and advice on the way to work with green screen quite a few them are not very thorough or precise. Prior to following these, be sure to look at my own articles and evaluations on [Green Screen Studios](#) and [Green Screen Studio](#).
