The Different Types Of T Shirt Printing

With the advancements in technology that we have, there are diverse forms of t shirt printing available nowadays. Listed below are the 3 most popular kinds and how they differ from each other.

T Shirt Printing Via Screen Printing

Utilising a screen, ink filtered out goes to the parts that have to be printed on. This process necessitates the use of a stencil made of a non-permeable material which is the negative of the design. With the ink not going to the parts where it should not be, a clean effect is then attained.

Screen printing is the most common kind of T shirt printing for the reason that the stencil can still be used repeatedly, with printed shirts to be mass produced. Not only does this technique can be utilized on shirts, but also on jackets, sweaters, caps or canvass bags.

T Shirt Printing Using Direct To Garment Printing

With this method, multi-color images are created on the article utilizing a special kind of printer. The same approach is done when paper is printed on using an inkjet printer. Unlike when using screen printing, more colors and hues can be applied here. Moreover, this is the way to go when printing in huge quantities because it has the capability to render the requirements in a more efficient way.

T Shirt Printing Utilising Heat Transfer

Heat transfer is done by utilizing heat to create a design on the shirt. The design is printed on a carrier paper which is a special kind of paper and then put on the predetermined spot on the shirt. Subsequently, heat pressure is given on the special paper that transfers the ink to the shirt. On-site or rush projects can be accommodated by the heat transfer method because of its ease of availability even in malls.

The above techniques are, generally, considered proven already. The choice of what T shirt printing kind to employ depends on your preferred output quantity and quality of the design.
