Accelerated Degree Program - Do Bachelors Degree Accelerated Programs Have Any Major Pitfalls?

It seems like accelerated degrees are all of the rage these days, and everybody wants to jump on the bandwagon and get started with this move. It's certainly an intriguing possibility, and in truth, it holds many advantages that people find appealing. But that doesn't mean that it's perfect for everybody and all situations. Take a look at these potential disadvantages of accelerated learning to see whether or not it's a good match for you.

Accelerated programs, by their nature, require that you take on a heavier workload. This for many people is a true downside, because you have to fit in a lot more work into a tighter window of time, and it can be a lot to deal with.

Nobody said it would necessarily be a walk in the park to do this. When you have to think about your family and home life, all of your work responsibilities and the time you spend there, and everything else, then school can be a handful all on its own. Picking up the pace can therefore be just too much for some people, even though it could offer so many benefits at the same time.

Some people don't really like the online format that these [accelerated degree programs](#) are offered in. Online programs have come a very long way since their inception. They are more diverse and offer a much richer learning experience than ever in the past thanks to improvements in technology and quicker Internet speeds. But they still don't perfectly emulate the real classroom learning environment.

Another issue with online learning is that you're totally accountable for itself. That's not necessarily bad, but it means that you have to be the one that motivates yourself even when you don't have a teacher over your back and you aren't mandated to appear in a classroom once or twice per week.

Working online also means that you need to be able to do that, which means having the right equipment and technology on hand. You'll need your own computer with up to date software programs, you'll need a dependable, fast Internet connection, and you'll also need a comfortable space to study and learn.

Finally, some kinds of programs simply aren't going to work well in the online format. Some things you really need to work with hands-on, and learning on your own in a book doesn't do it justice. So the topic of study is something that you need to evaluate to see if it will be match for an accelerated, online format of learning.

So there are certainly a few potential downsides to taking an accelerated program, and taking it online. Nothing is ever going to be perfect though, so you have to weigh the upsides against the drawbacks to see what's really worth it for you. Millions of students are finding that the positives are far greater than the negatives in this case.

Quick education options are out there. Established, respected online colleges are now offering the chance at faster education. [Accelerated Program](#). Find the flexibility you are looking for. Get the college education you need to succeed in today's world.
