# **Web Hosting & Web Design Tips, Getting Started With A Website In Three Steps**

Everybody wants to know how to create a website, because it could hold an unlimited array of potential in terms of new business ideas or other opportunities. You can quickly learn how to get on board if you know where to start.

It's a fact that Internet is growing on a stable basis, and countless of searches are performed each day worldwide. Creating your website comes in three methods.

The first step in the process is to purchase a domain name, which is your web address. You buy this from a registrar company, typically for about \$10 for a year for a .com or .net name.

This domain name is your unique spot on the web where people can find you. Choosing your name will depend upon keywords, brand name, how easy it is to remember and more.

Now that you have a domain, you need some web hosting. The web hosting provides you the space to store your files and have people access them. There is a huge array of different web hosting providers out there today, each of which are just a bit different.

Not all of these web hosting providers are equal though, and you want to find one that offers a high quality service that ensures your site runs consistently and smoothly. Look for uptime guarantees of at least 99% or even 100% to ensure that your website is always functioning.

Finally, you need the actual tools, platforms and services to create and manage your website. This can be a piece of standalone software, or it can be an online content management system that functions as a blog. These choices again differ greatly, but there are lots of strong options.

If you know what you're doing with coding, you can use a program that allows you to enter and edit the code directly. If you don't have any experience with that, you can use more basic programs that allow you to work with tools to create pieces of your site automatically.

Do you need a dedicated server? Alojate.com is the premier [web hosting](#) company in Mexico, offering a range of services for every business needs. Dedicated servers, factura electronica, [hosting](#) & domain registration.
