# **Minimize Your Carbon Foot Print With Window Draught Proofing Through Winter**

There are a great many benefits to having draught proof windows put into your home. One of these is that you can reduce your carbon foot print with sash window draught proofing this winter. By installing these special windows you are able to reduce the amount of electricity you use and reduce your home's environmental impact.

When an expert draught proofs your sash windows they seal up the window so that heated air is unable to escape through the gaps in between the window pane and the sash. This means that your heating is able to function a lot more efficiently than it can when there are regular windows in place in the home.

Since there is much less electricity needed to heat the home throughout, this means that there is less environmental impact caused by your individual home. In addition to this the reduced amount of electricity being generated and used within your home, means that you will also have lower electricity bills.

In many cases you are able to reduce your winter electricity bill by around one third when you have draught proof windows installed in your home. You can also save yourself money through the summer months by keeping the cooled air conditioned air in your home more effectively too.

There are a variety of options when you want to draught proof your windows. You should visit a couple of showrooms to get a feel for the different options on offer and get a couple of different quotes on the total cost to install the new style of windows. These days, it is a competitive market, which means that for you the buyer there are some big savings to be made if you shop around.

As well as having less of an impact on the environment and saving you money, there are some other benefits to putting in these kind of windows. They are more secure as they are more difficult for burglars to break into and they also reduce some of the noise that can enter the house from outside.

If you are interested in how to reduce your carbon foot print with sash window draught proofing this winter and save money too, then you should find an installation expert to put them in for you. They are an affordable choice for making your home cozier through the winter as well as making it more environmentally friendly and less costly.
