Reduce Your Home's Carbon Foot Print Through Sash Window Draught Proofing This Winter

One of the common problems that arises when cold weather begins setting in is draughts. Many people experience draughts and cold spots in their home when their windows are not properly cared for. By spending the time to reduce your carbon footprint with sash window draught proofing this winter, you can significantly reduce your energy bills and increase the comfort in your home.

The savings that comes from making your home energy efficient can more than off-set the cost of having repairs, such as draught proofing done. In addition, some regional utility companies offer incentive programs to customers that get their windows repaired or replaced.

The technicians you choose should not only be familiar with the different types of draught proofing available, but also with the area where you live. They will have references and be able to provide estimates for the proposed project. The cost of window repair and draught proofing can vary greatly, so getting prices ahead of time will be an important step.

In some cases you will not feel a draught, but rather a cold spot in a room. This is especially true when your home is not well insulated. Besides increasing your energy bills, there are many toxins that are released through windows that are not sealed properly. When the windows have been properly sealed, your home will no longer emanate toxins into the air.

Individuals who live near a street or road also have a problem with toxins and noise entering the home through the space that exists when windows are not sealed properly. It can be very uncomfortable when pollution from vehicles going by and the noise of traffic are constantly coming into the home.

A professional technician will be able to tell you about the options available for sealing, repairing, or replacing your windows. When you are working within a budget, this individual will be able to give you the methods and techniques to use that will repair seals in your windows and eliminate draughts and cold spots in your home.

A double glazed, well sealed window reduces the amount of pollution and noise that enters your home and significantly reduces the cost of keeping your home warm. It is easy to reduce your carbon footprint with sash window draught proofing this winter and reduce your energy bill by over half as soon as the project has been completed.
