Searching For A Used Power Pole For Sale In Online Classified Ads

Many might think that all power poles are used for above-ground utility wires, but sports fishers know that this term can refer to a fairly recent technological advance in the stop and go method of stalking schools of fish in shallow waters. Finding a used power pole for sale is easy online, where many classified sites have listings for these sought-after devices.

Power poles, also called shallow water anchors or dig in anchors, have nothing to do with utilities. Rather, they are hydraulically driven posts which are mounted on the outside of a fishing boat. When extended to the bottom of a lake, shore, or river, they keep boats in place, with bow to the wind or the current and no need to keep the engine running. The units range from four-foot models to poles six, eight, or twelve feet long.

Being mounted on the outside of the boat just above the waterline, the devices avoid some problems of using an anchor that is tossed overboard. With nothing to manually throw out and bring in, there are no coils of rope to foul and no bottom-dragging anchor to bring water, mud, sand, or subsurface weed aboard.

One or more electric switches installed in the boat make it quick and easy to drop the pole or raise it, without having to have one or both hands free to handle a traditional anchor. Some models work off a remote control, which can be activated from anywhere in the boat. Designed for boats up to 23 feet long and up to 4500 pounds, these devices make it easy to concentrate on stalking and catching fish.

The device will hold a boat up to 4500 pounds and over twenty feet in length against wind and currents, eliminating the need to keep the motor running while trying to maneuver above a school of fish. Irritating delays of reeling in an anchor, which may be hung up on submerged trees or rocks, are all in the past. Easy to install, these anchors go just above the water line, under the transom or at the bow.

Created by a computer guru with mechanical engineering talents as well, the original concept of 1998 is constantly being improved. Before you go online to see what is listed in the ads, check the manufacturers sites for the features to be found in different models of shallow water or dig in anchors, which range from four to twelve feet in length. Newer ones even come in designer colors.

It is always nice to get a bargain, and finding a used power pole in the online classifieds can really make the day for a dedicated sports fisherman or woman. For those who like fishing the flats and shallows, these outboard anchors are great time and effort savers.

If \$1,600 for a POWER POLE ANCHOR seems expensive then take a look at a Less Expensive alternative to the [power pole](#) anchor or Check Watch this [Cool Video](#) demonstration.
