# **Check Out The Reasons Why Radiation Therapy Jobs Are So Hot**

The medical field will always be a rewarding career. There are many fields of specialization so if you haven't yet chosen what you want to pursue, perhaps you should browse through the list of medical careers to figure out your options.

In our society, injuries, accidents, sicknesses medical emergencies happen. When someone is injured, sick or hurt, they need a trained and licensed medical professional to see to them. This process may start with the first responders, such as EMTs in an ambulance. Or, it could begin with an HMO or a PPO health care network.

Who stands ready to assist the sick and hurting? From the moment someone needs medical help, they are going to come across health care treatment professionals each stage of the process. The EMT or emergency medical technician has to stabilize the patient until they arrive at the hospital.

It is the health and wellness workers that nurse people back to health. Upon their arrival, based upon their particular injury or health problem, a person could possibly encounter nurses, doctors, anesthesiologist, radiation therapists, x-ray technicians and others. They could go through a MRI, eye surgery or even meet a radiation therapist.

In the medical field, there are no limitations. If you want to help someone with his or her eyesight, you can become an optometrist. Their job is to examine the vision of the patient and then prescribe eyeglasses or contact lenses. They may also prescribe medication as part of vision therapy and low vision rehabilitation.

The paths you can take are unlimited! If you would like to work in an emergency room or in a health care clinic. Then perhaps you can elect to become a registered nurse. Their job is to care for the injured, sick and disabled. This is done by making the rounds and checking on the vital signs of the patients, including the blood pressure, pulse and respiration.

What would we do without nurses? They're the individuals overseeing the various medications; apply dressings and performing a host of critical tasks as instructed by healthcare doctors. As you can tell, we really haven't scratched the surface.

Clearly, the medical field is just what the doctor ordered! You just have to discover the area that you like and then take the proper training and programs in order to be credentialed and/or licensed. In conclusion, this really is one career that provides staff the luxury of remaining employable at all times.
