# **Some Interesting Information About The Use Of Paper**

Humans have been looking for something to write on since language was invented and paper came soon afterward as a solution. The early Egyptians used eucalyptus leaves that were beaten flat so that they would have something to make markings on. Many people would be lost without it to write down their grocery lists or to remind them of important events. We cut it, dye it, shape it, burn it and do many more things to it. We get it when we stop at the store and usually turn right around and throw it away.

Humans have used forms of it since ancient Egyptian times. They used flattened Eucalyptus leaves as sheets of it so that they could write or draw upon it. When it was not as easy to come by as it is now, people used tablets of stone and pieces of chalk or charcoal for their writing and recording needs.

Modern technology has made it so that we can take notes on small electronic pads or on our phone. Unfortunately, a lot of the modern technology is somewhat complicated to the mind of the average consumer, who would just rather pull out their pen and a pad of paper and jot down whatever they are thinking. We have many uses for the product other than writing letters or notes and it is obvious just by taking a look around the average home.

There is not a place on Earth that does not use some form of this material. It can be burned or shredded for disposal. It can be laminated so that it lasts for a lifetime. It can be seal or embossed, pummeled till it is soft as tissue, made fire-resistant, frozen or hardened.

As societies lean more toward recycling and using this product less for environmental and economical reasons, we will continue to see such things as paperback novels and advertisement brochures. It is much cheaper to advertise or pass communication this way than to buy the expensive electronic equipment available today. Recycling has made an excellent positive impact on the planets health.

It is an essential part of everyday living. It is for use in the bathroom and the kitchen, in rolls of squares or thick napkin squares. When a cold threatens to infect everything with germs, it is used to sanitize and keep the nose from getting red and raw.

We use it to make picnic products. This includes cups, napkins, plates, tablecloths, utensils and so much more. The quality of the product is often reflected by the price it is sold for. It is still used in business every single day for drafts and memos. Books are still being written, printed and sold in the millions. It seemed the e-book fad would take over completely, in essence eliminating the traditional paperback books. This is not proving to be the case, although this industry does continue to grow.

A very common item that is used and continues to be made of paper to this day is the business card. Even though drivers licenses and many other ID cards have gone to paperless systems and issue plastic cards instead, some things like car registration, and medical insurance cards are made of it to this day.
