Paper Cups Together With Its Advantages

Paper cups are used everywhere: on trains, in schools, in offices, at medical facilities and more. The exact origins of the paper cup appear to be unknown. Who first thought of making a disposable beverage holder out of paper may never be known. What's known is that around the start of the 1900s, paper cups became popular when people began to realize that sharing the same tin or ladle, out of water barrels also meant sharing germs.

In 1907, a man named Lawrence Luellen developed what later became known as the Dixie Cup to help raise public hygiene. He then developed a water-vending machine with disposable cups and started to educate the public on the harms of sharing drinking glasses. As a matter of fact, Dixie Cups were originally called "health kups" since their original function was to promote public hygiene. During the great American flu epidemic of 1918 paper cups quickly grew in popularity as a way of preventing infection.

Paper cups come in a multitude of forms. The 2 main groups are cups for hot drinks like coffee and tea and cups for cold beverages such as sodas and milk. A paper cup is produced from paper or board, which is itself usually manufactured from sustainable forest resources, and a polyethylene sheet laminated together to make a single sheet. This sheet material is then formed into a paper cup cylinder and the bottom sealed with a disc to create the standard paper cup, which could be produced in a wide range of sizes from 'espresso cups' to tub shaped food containers.

The major component of any paper cups is, by definition, the paper and it is easy to forget that cellulose fiber, the individual fibers used to produce a sheet of paper or board, is probably one of the world's first and most abundant bio-polymers. Modern paper and board companies comply with the sustainable forest guidelines, such that for each tree taken down at least one replacement tree is planted. In this way the major constituent of the paper cup, the cellulose, comes from a renewable resource. Paper cups arrive in a variety of dimensions, shapes and colors, each basic and printed, from trustworthy producers. As they are light-weight, they can be easily carried about. They are meant to empower end users to hold the cup comfortably and appreciate the drink or beverage in the cup. One of the largest benefits of utilizing these cups is that they are disposable and decrease the hazards of catching infection. In addition, the tiresome tasks of rinsing can be avoided which is a wonderful benefit for foodservice stations searching to save time and cash.

As per coffee cup advertising, to be able to maximize use of paper cups, cup dispensers should be used too. Handy models of cup dispensers help store paper cups without damage and denting. These devices are indispensable in busy restaurants and other food service stations. They are available in various capacities, with the ones intended for restaurant use much larger in size compared to those meant for home use.
