# What is Virtual Hosting?

Shared hosting does have its advantages over the other forms of web hosting out there. But the one thing to take into consideration first before weighing the different types of hosting services able is this. What is the type of web hosting that you require the most and why? This is the thing you need to decide before you go further and review the three different kinds of web hosting packages that are available.

If you know what you need specifically in a web hosting service and what you require that service for specifically. You can then go forward and decide which web hosting service will serve your overall needs the best.

Since shared web hosting is just what its name denotes which is shared among many. It is web hosting that does ask for system administration being that it is used by a group of users instead of just one or two specifically. This system administration which is in place can be accomplished by control panel products such as cPanel, Plesk or InterWorx is. These control-panel systems are usually web-based and a lot of the larger hosting companies do employ the use of their own control panels that are custom developed by them.

The types of virtual web hosting do include web hosting choices that are based on name, IP address based, and port-based in nature. Web hosting service that is based on name has numerous different names that point back to just one web server IP address and connects using a web browser that does support the network protocol called HTTP/1.1.

Once you have begun setting up the type of website you have always wanted for yourself. The next step is to choose the right kind of web hosting to go along with it side by side. This is not an easy task to take on sometimes.

Shared hosting is not only an extremely popular form of web hosting in its own right. It is also a very cheap alternative way to go if a web host is not looking to spend a whole lot of money where his or her website hosting service is the focus. This form of web hosting will only cost a few dollars a month to use.

Nevertheless, before you even think of getting this hosting type, you should do some very thorough research on the subject itself. A shared hosting provider that is good. Is one that will not only offer you good quality service. But one that has a control system that is both user friendly and has all the benefits that a shared hosting company is capable of to be highly competitive on the market.

However, if the number is being used by another program on the same server, it will be inaccessible. The downside to using this form of web hosting is that many people have trouble remembering other port numbers that are not the default number and do not know where to look for the non-standard numbers on a web site.
